

Manual - ReactClicker

- Needed:
 - Three "Ledbuttons" (Red, Blue, Orange)
 - One-Pico-W
 - Put:
 - Orange -> D20
 - Red -> D18
 - Blue -> D16

- Build (very important):

HOW TO PLAY:

- Needed Hardware: RaspberryPi-PICO, Three Buttons (blue, red and orange)
- Needed Software: Node.js, VSCode, ArduinoIDE

- Needed Libraries: `Arduino.h` (in the Sketch there is only "Arduino-Core", so you don't need any extra C-libraries), node
- Note: Don't forget to install `Node.js` and the necessary Node-Modules for the `express.js`-Server
- Short: First start Webserver, then the PICO-Application
 - Put Buttons on correct Pins: BlueButton on `D16`, RedButton on `D18` and OrangeButton on `D20`
 - Start Webserver--> `node express.js` --> Open up `http://localhost:3000` on your Browser
 - Start PICO W --> Press BOOTSEL, put USB into your Laptop-Port, put Sketch (the analogue one) into your "ARDUINO-IDE" and upload it.
 - PLAY!
